

**Supplementary material A.** Shows the setup used to produce the images included in the current study. The image on the left depicts the camera and tripod setup, and the distance the camera was positioned from the centre of the stimuli. The right image gives additional details of the spacing and placement of stimuli, with each stimulus included in the image always placed on one of the blue dots, with this area being 15cm x 17.5cm. The distance between the furthest stimuli both vertically (10.4cm) and horizontally (11cm) is also detailed.
