*Controlling and Preventing Disease:
The role of water and environmental sanitation interventions*

WEDC, Loughborough University, UK.

ISBN Paperback 0 906055 90 3

Editorial contributions: Kimberly Clarke and Rod Shaw

Designed and produced at WEDC
Layout: Karen Betts
Illustrations: Ken Chatterton

Contents

Chapter 1: Introduction	1
1.1 Definitions of commonly used terms in this manual	1
1.2 Who this manual is for	2
1.3 Scope of the manual	2
1.4 Structure of the manual	3
1.5 How to use the manual	4
Chapter 2: Disease and disease transmission	7
2.1 Introduction to the transmission cycle of disease	7
2.2 The pathogen	9
2.3 The host	10
2.4 Transmission of disease	13
2.5 The environment	21
2.6 The future host	24
Chapter 3: Disease in the population	28
3.1 Endemic and epidemic occurrence of disease	29
3.2 Introduction to epidemiology	33
3.3 Mortality and morbidity rates in a population	40
Chapter 4: Water and environmental sanitation projects	42
4.1 The price of poor WES	43
4.2 The planning of WES projects and the project cycle	44
4.3 Improving impact and sustainability	45
4.4 Health, poverty, and development	50
Chapter 5: Domestic water supply	52
5.1 Water availability	52
5.2 Water quality	60
5.3 Additional health issues concerning water supply	69
Chapter 6: Sanitation	71
6.1 The transmission of excreta-related infections	72
6.2 Practical issues on sanitation	78
Chapter 7: Drainage	90
7.1 Surface water and the transmission of disease	92
7.2 Practical issues concerning drainage	94
Chapter 8: Solid waste management	99
8.1 Solid waste management and infectious disease	99
8.2 Practical issues about solid waste management	100

Annexe 1: Listing of diseases related to water and environmental sanitation	105
Faecal-oral infections	107
Water-based helminths	142
Soil-transmitted helminths	155
Tapeworms	163
Weil's disease and Guinea-worm infection	167
Water-washed diseases	171
Vector-borne infections	234
Annexe 2: Summary tables of infections related to water and environmental sanitation (excluding vector-borne infections)	235
Table A2.1: Faecal-oral infections	236
Table A2.2: Water-based helminths	239
Table A2.3: Soil-transmitted helminths	240
Table A2.4: Beek and pork tapeworm	241
Table A2.5: Leptospirosis and guinea-worm infection	241
Table A2.6: Infections transmitted through direct contact	242
Annexe 3: Summary tables of vector-borne infections, vectors and their control	243
Table A3.1: Vector-borne infections with their vectors	244
Table A3.2: The vectors and their characteristics	246
Table A3.3: Preventative measures against vectors	248
Annexe 4: Chlorination of drinking water	252
Assessing whether the raw water can be chlorinated directly	252
The mother solution and chlorine-generating products	253
Determining the chlorine demand of the raw water	254
Annexe 5: Calculating the size of pits for latrines, and assessing their infiltration capacity	258
Determining the required size of a pit	258
Determining the infiltration capacity of the pit	259
Annexe 6: Designing a simple stormwater drainage system	264
Analysis of the catchment area	264
Determining the rainfall intensity for which the system is designed	265
Calculating the amount of water the catchment area will produce	266
Sizing a drain to cope with the design peak runoff rate	267
Annexe 7: Priorities and standards in emergency situations	270
References	275
Alphabetical index of diseases	281
