

Version 4 Release Notes

General Notes

The model is supported at a ground clearance of 40mm using M8 threaded bar which sits into recesses in the model underbody. The model is held onto these supports using its own weight.

CAD Data

The CAD models have been updated to include the rear diffuser which was present on the model tested in the experimental work. Apologies for this error on our part and thanks to Emmanuel Guilmineau for pointing this out to us.

PIV Data

No changes have been made to the PIV data in this version update.

Pressure Data

The time-averaged centreline pressures have been included in the database along with the model centreline outline.

Force and Moment Data

No changes have been made to the force and moment data in this version update.
